

PRODUCT CATALOG

Behdad Compatible Concrete Company

This group started working under the name of Khorashian Saz Company in 2016 with the aim of implementing construction projects on a limited scale. Therefore, we started research in this field on a large scale and established the necessary cooperation with several domestic and foreign manufacturing companies in the field of construction products. After that, we saw many product displacements in the field of construction, and with the grace of the great Lord, we were able to create new solutions by establishing different production and executive companies. Now, by expanding our laboratory and research activities, we have been able to create new products in the field of ease of implementation of construction projects with very low costs.
