

We operate on the principle of customer orientation and fairness Implementation of modern flooring with concrete foam instead of pumice with many more advantages such as affordable price (even cheaper than pumice in works above a thousand meters), very light weight (one third of pumice), high strength and levelness, which makes the structure more resistant and It will save on the next mortar (ceramic). * High execution speed (500 meters per day) * No meeting in the coming years * And the ceramic does not loosen. *It is also insulating against cold, heat, sound, moisture, insects and fire Because the structure is strong and does not have excessive weight, the units above the parking lot will have good heating and cooling under the roof. At the same time, the noise of the feet on the upper f...
