

The vast land of Iran is a climate rich in valuable resources, many cities and settlements, and hardworking people. Our ancestors have long been aware of their living conditions, defined the form of life in accordance with it, and tried their part in exploiting the resources and facilities, in accordance with the climatic conditions of cities and villages. Thanks to the ingenuity of its inhabitants and the intelligent management of limited water resources, Iran's low rainy climate was still suitable for living, and even in the rainy and dry seasons, farmers, landowners, and villagers enjoyed the blessings of refreshing water thanks to the Moghans. As the invention of the aqueduct or in other words karez was one of the inventions of Iranians and was introduced to other parts of the world. \...
