

In 1390, Paya Poish Sabz company first investigated the existing situation with field studies and started its activity based on structural challenges and basic needs in the field of infrastructure development in the agricultural system and engineering of pressurized irrigation systems. Considering the correlation and relationship of water-plant-environment, the activities of this company in the field of optimizing modern irrigation systems and increasing agricultural production are based on the optimal use of water and plant nutrients (fertilizers). The management and employees of Paya Poish Company believe that growth and stability are in dynamics. Like the flow of clear water in nature's veins that brings greens and dates. We intend to use our knowledge and expertise to protect ever...
